 Sir Issac Newton

- He would spend much of his life at Cambridge becoming a professor of mathematics and a fellow of the Royal society.
- He eventually was elected to represent Cambridge University as a member of parliament.
- Isaac had to leave Cambridge from 1665 to 1667, because of the Great Plague.
- He spent two years working on problems in mathematics and physics. There in two years of solitude, his dormant creativity blossomed in a deluge of fundamental discoveries in mathematics and physics: **binomial theorem for negative and fractional exponents, the beginning of calculus, the law of gravitation, the spectrum of white light, and so on.**
- Returning to Cambridge, he pursued his investigations in optics and devised a reflecting telescope.
